Problem Statement :

Nowadays, People are busy in their schedule and working, they do not have time to read the newspapers and articles. Even they don't have time to see the news applications. Because the news application shows the lot of news that is not relevant to the user rather than what they need. so we need to fulfill the user need in that particular stuff by providing the useful headlines and important news in the application to the user. There are multiple news-sharing apps used by a single user and are often spammed with notifications. There is also a lot of fake news which gets shared. A news-sharing app wants to help users find relevant and important news easily every day and also understand explicitly that the news is not fake but from proper sources.

Who does the issue affect?	Entrepreneur, Businessman
When does the issue occur?	While reading the daily news
What does they want?	They need to get the important news and crisp news from their favourite in the busy work.
What does the issues they faces?	Let as take a newspaper there is lot of irrelevant news and in news

	application there in no news actually what they need.
What does make them feel?	Some news are irritating and they feel like they are wasting more time while reading this type of news
Why should we fix this issue?	Because in their busy schedule they are not ready to waste their time on reading this type of above news.so we gonna create the news application that will shows the important and relevant news to the user with user friendly interface and they are getting quick peak of the day.
